

THE ALL-IN-ONE STUDY WORKSPACE FOR MEDICAL STUDENTS

Know exactly what to study next.

Synapse brings the library, question bank, practicals, resources, and schedule into one calm workspace — then answers every student's real daily question: **what should I study today?** Built Arabic-first, fully bilingual, and designed for hours of focused study.

8 Organ systems	3,200+ Explained questions	AR · EN Fully bilingual	1 Calm workspace	100% Answers linked to the library

What makes Synapse different

The things no other study app in the region puts together

Arabic-first, truly bilingual

A complete right-to-left interface — mirrored layout, Arabic numerals, reviewed medical terms — with one-tap switching to English. Built for the region, not translated as an afterthought.

It tells you what to study next

Spaced-repetition review and exam-readiness signals turn an overwhelming syllabus into one clear move each morning.

Everything connects

Every question links to the exact library topic and the source resource — one click from a mistake to the explanation and the reading.

Learn in context

Key concepts reveal their definition the moment you need it — right after you answer — so understanding sticks.

Real exam preparation

Written questions, OSCE stations, clinical cases, and oral/viva practice with model answers — the whole exam in one place.

Calm by design

A quiet, premium 'clinical chart' interface built for long study sessions — not a noisy, gamified app.

Everything students need, in one place

Smart Library Every topic and subtopic in clear sections. Students can write their own articles and add personal, searchable tags.	Question Bank Pick a whole chapter or a single subtopic, choose 5–40 questions, and get worked explanations for every answer.
Practical & Oral OSCE stations, clinical cases, and the most common viva questions — with model answers hidden until you're ready.	Calendar The university curriculum and the student's personal study plan in one view, with tappable event details.

Performance

First-attempt accuracy, trends, weak areas, and cohort context — so students know where to focus.

Resources

Books, PDFs, and videos organised by subject and chapter — the right material, one filter away.

Whiteboard

An infinite canvas to connect ideas, with movable sections and sticky notes.

Study Together

Share a test with classmates from a single link and solve it live.

Who it's for

For students

Undergraduate medical students across the organ-system curriculum who want one calm place to study — from the first lecture to exam night.

For institutions

A full admin console to author and review content, run the academic calendar, manage subscriptions and payments, and automate student communications.

One workspace. Every study tool. In Arabic and English.

Synapse — clinical study, in one place.
